XAVIER ALAZARD LE CARRE DES HUILES

Olive oil

In the heart of the Baux-de-Provence Valley and the Alpilles Regional Natural Park, in the typical Provencal village of Maussane, stands the Moulin Jean-Marie CORNILLE since the 17th century.

Xavier Alazard, the nephew of Jean-Marie Cornille, took over the family lands 3 years ago to preserve his family's know-how and develop incredible Olive Oils. He works his land in a traditional way, emulating his ancestors and their techniques.

The Valley of Baux de Provence and its Mediterranean climate are a perfect combination to cultivate olive trees.

As a testament to his dedication, he has been a member since 2017 of the "College Culinaire de France", a label dedicated to support, promote and share exceptional artisanal products.

Today his Oils are found amongst some of the most beautiful restaurants in France.

• Tree Care

Olive trees are hardy plants. In addition to the care commonly given to cultivated trees, most olive trees require specialized care to ensure their health and to maintain proper growth patterns

• Olive tree Prune and Care

Prune your olive trees properly. Always clip branches at the leaf nodes to encourage fuller growth. If only a single trunk is desired, prune away any growth below the desired branching point. If you wish to cultivate the gnarled appearance of several entwined trunks, stake basal suckers and lower branches to the desired angle and allow them to twist together.

Prune upper branches only to train them to grow in the direction and shape desired...

• Olive Harvest

The common harvest time begins at the end of October and lasts until end of December.

You can use special combs and nets to harvest. The olives are then stored inside plastic crates in order to bring them to the mill...

CARRE DES HUILES - CONDIMENTS	REF	MOQ	UNIT/KG	WEIGHT / PIECE
Fruite Noir 50 Cl	CH1	1	UNIT	50 CL
Fruite Noir 75 Cl	CH2	1	UNIT	75 CL
